A square divided into four equal quadrants by a horizontal red line and a vertical red line. The top-left quadrant is shaded light blue. The top-right quadrant is shaded light green. The bottom-left quadrant is shaded light orange. The bottom-right quadrant is white.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is white. The top-right square is white. The bottom-left square is white. The bottom-right square is white. The grid is defined by red lines.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The lines intersect at the center of the square.

A 2x2 grid with red lines. The grid is composed of four squares. The lines are red and intersect at the center. The grid is used for drawing a diagram of a molecule.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The lines intersect at the center of the square.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The lines intersect at the center of the square.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The lines intersect at the center of the square.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The quadrants are empty.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The lines intersect at the center of the square.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The quadrants are empty.

A square divided into four equal quadrants by a horizontal red line and a vertical red line. The quadrants are empty.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is empty. The top-right square contains a small red dot in the center. The bottom-left square contains a small red dot in the center. The bottom-right square contains a small red dot in the center.

A diagram showing a square divided into four quadrants by a horizontal red line and a vertical red line. The top-left quadrant is shaded light blue, and the bottom-right quadrant is shaded light orange. The other two quadrants are white.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is empty. The top-right square contains a small red dot in the center. The bottom-left square contains a small red dot in the center. The bottom-right square contains a small red dot in the center.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is empty. The top-right square contains a small red dot in the center. The bottom-left square contains a small red dot in the center. The bottom-right square contains a small red dot in the center.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is white. The top-right square is white. The bottom-left square is white. The bottom-right square is white. The grid is defined by red lines.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is empty. The top-right square contains a small black dot in the center. The bottom-left square contains a small black dot in the center. The bottom-right square contains a small black dot in the center.

A 2x2 grid with red lines. The grid is composed of four squares. The top-left square is white. The top-right square is white. The bottom-left square is white. The bottom-right square is white. The grid is defined by red lines.
